

# How To Use Roon Server on Z1?

Before using Roon Server, please make sure your mobile device has Roon Remote app and VitOS Manager app installed. And make sure your mobile device is connected to the same network that Z1 resides.

Step 1: Install Roon Server to Z1, and configure Audio Selector in Z1.

Power on Z1 and use VitOS Manager app with mobile device to discover the Z1. What below shows the screenshot of the VitOS Manager discover page.

When the Z1 is found, click on "Manage" to enter the main page of this Z1.

Import music from external USB disk to Data Disk. 🗦

Music Importer

Roon Server is a music management and playback solution that takes a very different approach to interacting with your music. Instead of seeing a spreadsheet-like view of your music (as with iTunes and almost all other media systems), Roon provides a very rich non-list based experience, using credits, artist relationships, genres, lyrics, concert/tour dates, artwork, and more to allow for an informative navigation and exploration of your library. Click on "Install" to install Roon Server to this Z1.

Click Install button above to install Roon Server to this VitOS device.

[Learn More]

Wait until the installation is finished and it shows the status of Roon Server is "Running", which indicates Roon Server is up and running. Below screenshots show the Roon Server page and main page.
